Scientific Study from the year 2019 in the subject Didactics - English - Pedagogy, Literature Studies, University of Yaoundé 1 (Faculty of Arts), language: English, abstract: This work, which describes the English of these francophone users, comprises an introduction, seven chapters grouped into two parts, and a conclusion. The introduction overviews the historical background of the country and its geographic and linguistic situations. Part One deals with the didactics of English in Cameroon; it comprises three chapters which take up in turn the languages in the education system of the country, the teaching of English in primary and secondary schools as well as tertiary level institutions. Part Two, which tackles the description of the English speech of francophone users, first outlines the research design. Then it takes up the sound system of francophone English, focusing on the realisations of consonants and vowels, and stress placement. Next it examines the vocabulary of this variety of English and finds that it is characterised by an excessive use of direct loan, calque, and false friends. This is followed by a description of the morpho-syntactic features of the variety. The frequent features identified can be grouped under 12 major categories of items, i.e., verb tenses, articles, the plural form in noun phrases, pronouns, word order, subject-verb agreement, adverbs, prepositions, question formation, negation, verbs in embedded clauses, and serial verbs. Lastly, drawing from the findings outlined in these linguistic analyses, the researcher makes an appraisal of Cameroon's French-English official bilingualism policy. The various measures taken over the years by Government to promote official bilingualism are evaluated first. Then the consequences of the failure of this policy are considered. Finally a way forward is proposed: there is a need to adopt a new syllabus purposely designed to enhance bilingual competence among francophones in the country. Francophone English as Kouega notes, is a dialect of English that is developing in a number of Expanding Circles countries where French has hitherto been the sole or primary medium of instruction. In Cameroon, francophone children learn English as a subject from primary school alongside other subjects like geography, which are taught in French. English is taught as a subject from the primary to the tertiary level of education. It is taught in all schools as part of the implementation of the country's French-English official bilingualism policy that was adopted in 1961 when French Cameroon and English Cameroon united to form a federal state.

Hard-headed evidence on why the returns from investing in girls are so high that no nation or family can afford not to educate their girls. Gene Sperling, author of the seminal 2004 report published by the Council on Foreign Relations, and Rebecca Winthrop, director of the Center for Universal Education, have written this definitive book on the importance of girls' education. As Malala Yousafzai expresses in her foreword, the idea that any child could be denied an education due to poverty, custom, the law, or terrorist threats is just wrong and unimaginable. More than 1,000 studies have provided evidence that high-quality girls' education around the world leads to wide-ranging returns: Better outcomes in economic areas of growth and incomes Reduced rates of infant and maternal mortality Reduced rates of child marriage Reduced rates of the incidence of HIV/AIDS and malaria Increased agricultural productivity Increased resilience to natural disasters Women's empowerment What Works in Girls' Education is a compelling work for both concerned global citizens, and any academic, expert, nongovernmental organization (NGO) staff member, policymaker, or journalist seeking to dive into the evidence and policies on girls' education.

Applied Mathematics: Made Simple provides an elementary study of the three main branches of classical applied mathematics: statics, hydrostatics, and dynamics. The book

begins with discussion of the concepts of mechanics, parallel forces and rigid bodies, kinematics, motion with uniform acceleration in a straight line, and Newton's law of motion. Separate chapters cover vector algebra and coplanar motion, relative motion, projectiles, friction, and rigid bodies in equilibrium under the action of coplanar forces. The final chapters deal with machines and hydrostatics. The standard and content of the book covers C.S.E. and 'O' level G.C.E. examinations in Applied Mathematics and Mechanics as well as the relevant parts of the syllabuses for Physics and General Science courses related to Engineering, Building, and Agriculture. The book is also written for the home study reader who is interested in widening his mathematical appreciation or simply reviving forgotten ideas. The author hopes that the style of presentation will be found sufficiently attractive to recapture those who may at one time have lost interest.
