Component design is an approach to mixed options evaluation which conducts qualitative components of the evaluation separately to quantitative components, and then combines the data at the time of report writing. Sometimes these components relate to different data sources (for example, qualitative data from key informant interviews, and quantitative data from a questionnaire with closed questions), and sometimes to different aspects of the overall evaluation (for example, qualitative data

Component-Based Design: A Complete Worked Example

A component diagram, also known as a UML component diagram, describes the organization and wiring of the physical components in a system. Component diagrams are often drawn to help model implementation details and double-check that every aspect of the system's required functions is covered by planned development.

A component-level design can be represented by using some intermediary representation (e.g. graphical, tabular, or text-based) that can be translated into source code. The design of data structures, interfaces, and algorithms should conform to well-established guidelines to help us avoid the introduction of errors.
