Coral reefs provide protection and shelter to nearly one-quarter of all known marine species and have evolved into one of the largest and most complex ecosystems known to humans. Coral reefs are home to over 4,000 species of fish, 700 species of coral and thousands of other plants and animals. This diversity of species provides a large gene pool giving communities more resilience during extreme environmental conditions and climate change.

One of the most exciting parts of setting up a marine aquarium for the first time is the introduction of corals, but the process can be nerve wracking, especially to the newcomer to the hobby. This is entirely understandable, just about all of what we might consider corals are sessile. They may be able to move over a very long time period, but in the main any coral is entirely dependent upon the aquarist to give it the conditions it needs to thrive, it can't swim away and sulk like a fish ...

changing planet. Reef Life is a handy, portable and comprehensive reference in a time when understanding and appreciating the diversity of our tropical oceans is at a critical point. A gallery of over 425 ray-finned fish species, as well as elasmobranchs (sharks, rays and skates), invertebrates, marine reptiles and marine mammals, offers readers an extensive identification guide to the most commonly seen marine species, with detailed descriptions of size, habitat, range and behavior. The book also includes: A guide to tropical marine ecosystems; Surveys of global coral reef communities, from the Caribbean to the Red Sea; A discussion about factors threatening marine ecosystems today. This is an essential selection for marine science and travel/tourism collections, scuba divers and snorkelers, and retailers and libraries in oceanside locations.

Yuri Latypov first observed live corals in Australia about 30 years ago and was struck by the beautiful growth and diversity of these remarkable animals. Since then he has had the opportunity to look and study at corals and coral reefs throughout the world from Australia's Great Barrier Reef up to Seychelles. He spent more than 3,000 hours underwater. He has conducted fundamental and applied research on coral in many places and has published the results of these studies in different scientific journals, 5 books and conference proceedings. Dr. Latypov gives especial attention to studying of corals and reefs of Vietnam. Last year he investigated opportunities of restoration of reef communities and carried out experiments on artificial cultivation and rehabilitation of corals on the Vietnamese reefs.
