This introduction to historic preservation goes well beyond the Secretary of the Interior's Standards for Rehabilitation and shows how wood, stone, masonry, and metal were used in the past and how adaptive re-use can be employed to bring modern amenities to historic structures. The book covers all aspects of the exterior and interior building fabric, including windows, roofing, doors, porches, and electrical and mechanical systems for both residential and small-scale commercial buildings. Richly illustrated with photographs showing typical elements of historic buildings, decay mechanisms, and remediation techniques, the book also contains a variety of useful case studies and features a companion Website that offers dozens of additional images and resources.

"Twelve peer-reviewed papers demonstrate the continuing advancement in the understanding of dimension stone used in building construction. Topics cover: Strength Testing--addresses testing to determine strength characteristics of dimension stone cladding panels. Design--covers a wide range of topics, including the advantages and disadvantages of three common dimension stone paving installation techniques; the relationships between stone material strength, anchorage strength, and induced stress states for four common dimension stone cladding anchorage configurations; and more. Evaluation and Investigation--provides observations regarding investigations into the causes of dimension stone cladding deterioration and failure. Durability--discusses the complex issue of dimension stone durability using three different approaches; a large-scale European research project to investigate the causes of marble and limestone cladding panel bowing, develop preconstruction testing parameters to assess bowing potential, and assess proposed remedial efforts to reduce or inhibit ongoing bowing; and more."--Publisher's website.

This volume brings together papers from the multidisciplinary Dimension Stone 2004 Conference, held in Prague. Looking at all aspects of this useful and attractive building material, experts from many fields of research offer their perspectives from geology, rock mechanics, geotechnics, the stone extractive industry, restoration work and architecture. The result is a wide-ranging and practical handbook for geologists, engineers and architects covering: - geological studies of traditional local stone types - advanced rock fabric and rock mechanics studies applied to dimension stone research - application of dimension stone databases for historical research and for stone marketing - GIS application to quarry planning - aspects of dimension stone deterioration - bowing of natural stone cladding and prevention - processing and benefits of waste from the stone industry.
