There's a new buzz phrase in the air: Supplier Relationship Management (SRM). Corporate executives know it's necessary, but there's only one problem. Nobody yet knows how to do it. Or they think it's all about bashing your vendors over the head until they reduce the price another 4% . Supplier Relationship Management: How to Maximize Vendor Value and Opportunity changes all that. Containing the best and most innovative advice from the operations and procurement experts at consultant AT Kearney, this book shows that SRM is at root a strategic discussion requiring cross-functional interaction and internal alignment at the highest levels. It requires an honest appraisal of the value that suppliers now bring to your firm, as well as their potential value. It then requires a frank and constructive business-to-business dialogue about how to improve the relationship. When this happens, a company reaps myriad benefits, ranging from new opportunity to added value to competitive advantage—and, quite likely, to overall (and sometimes substantial) cost reductions. This book shows the most concrete methods you can use today to: Identify value-adding opportunities in the supply chain Work closely with suppliers to maximize the benefits Work the "Critical Cluster" of suppliers, where the greatest opportunity for advantage lies Review suppliers to encourage constant gains in quality and cost Turn your SRM strategy into a major competitive advantage Supplier Relationship Management introduces and explains the Supplier Interaction Model, a key tool that will help you get the most from your supplier relationships. It segments the supplier universe into nine categories, from those you want to run away from fast to those so good and so useful to your organization that it can make sense to invest in them directly. Numerous case studies show how to apply the principles to your situation. Supplier Relationship Management burns off the fog that has surrounded the procurement process for far too long. It is the definitive guide for business executives who want to get the maximum benefits from suppliers and gain very real advantages over competitors.

Bachelor Thesis from the year 2018 in the subject Economics - International Economic Relations, grade: 1.0, Northumbria University, language: English, abstract: Over the last few decades, the status of a supplier changed from a simple supplier of goods to a strategic partner. Numerous companies have recognised this development and drive for collaboration with their suppliers, in order to enable mutual growth. The literature review will firstly discuss supply chain management in general, followed by a presentation of the different SCM practices for supply chain improvement. The strategic supplier partnership will be further discussed, and the different buyer-supplier relationships will then be presented. Multiple studies will be listed which disclose the positive impact of a successful and long-term buyer-supplier relationship. Nevertheless, should exceptional long-lasting buyer-supplier relationships not be seen as a universal key to success, therefore a management system for supplier relationships will be introduced. The results from the literature review will be compared with the collected primary data. The primary research consists of 5 semi-structured interviews with representatives from global acting companies, which have an implemented SRM system. The findings of the research show, that all of the involved organisations see their suppliers as strategic partners, but at the same time allocate different relationship types to their different suppliers. In addition, the numerous processual and organisational impacts on the supply chain after the implementation of an SRM system have been disclosed. These include the centralisation and standardization of processes and supplier data as well as a significant increase in companywide transparency. Furthermore, a positive impact of an SRM system on the company's performance has been identified, throughout the completion of the research project. Therefore, an SRM system should be seen as a tool that promotes and extracts the benefits of a successful buyer-supplier relationship.
