Thoroughly updated to include the latest research available, THEORIES OF PERSONALITY, 10E takes a unique theory by theory approach that carefully guides students through major theories on their way to a comprehensive understanding of personality. Richard Ryckman's student-friendly writing style offers a straightforward presentation of major theories, helping readers more easily distinguish between them. The text begins by providing a framework that defines personality and emphasizes the science of personality--including the interrelation between research and theory. Next it introduces each major theoretical position with an objective overview of the theorist's basic concepts and principles. It concludes by noting the ways in which the different theories stimulate additional research efforts and by presenting five current research trends resulting from the work of these earlier theorists. The result is a text that merges the best of classic and contemporary research to equip students with a solid working knowledge of personality. This unique workbook was written for the undergraduate Personality course where professors are looking for activities to help students learn and apply personality theories to real-life examples. The workbook is geared toward personality courses that are theories-based, as opposed to research-based. Because the cases explored are those based on normal behavior (as opposed to abnormal behavior), this workbook is especially useful. While most personality texts present the major concepts of personality theories, they don't help students apply the theories they

have learned or to use the theories to understand other examples on their own. This workbook will help students do just that and is the perfect complement to any Personality text.

Featuring important theories and trends not covered in other foundational texts, this book is designed to equip the next generation of counselors with the tools they need for understanding the core dimensions of the helping relationship. Topical experts provide contemporary information and insight on the following theories: psychoanalytic, Jungian, Adlerian, existential, person-centered, Gestalt, cognitive behavior, dialectical behavior, rational emotive behavior, reality therapy/choice theory, family, feminist, transpersonal, and—new to this edition—solution-focused and narrative therapies, as well as creative approaches to counseling. Each theory is discussed from the perspective of historical background, human nature, major constructs, applications, the change process, traditional and brief intervention strategies, cross-cultural considerations, and limitations. The use of a consistent case study across chapters reinforces the differences between theories. \*Requests for digital versions from the ACA can be found on [wiley.com](http://wiley.com). \*To request print copies, please visit the ACA website [here](#). \*Reproduction requests for material from books published by ACA should be directed to [permissions@counseling.org](mailto:permissions@counseling.org)

historical importance. It brings together for the first time the world's leading psychobiographers, writing lucidly on many of the major figures of our age - from Osama Bin Laden to Elvis Presley. The first section of the book addresses the subject of how to construct an effective psychobiography. Editor William Todd Schultz introduces the field, provides valuable definitions of good and bad psychobiography, discusses an optimal structure for biographical data. Dan McAdams explores the question of what psychobiographers might learn from current research in personality psychology. Alan Elms delivers wise advice on the tricky subject of theory choice in psychobiography. William Runyan asks why Van Gogh cut off his ear, and in the process explains how one evaluates competing interpretations of the same event in a subject's life. And Kate Isaacson describes a template for use in multiple-case psychobiography. Never before has method in psychobiography been so clearly and explicitly addressed. Those just getting started in the field will find in Section One a detailed roadmap for success. The remaining sections of the book are composed of richly engaging case studies of famous artists, psychologists, and politicians. They address compelling questions such as: What are the subjective origins of photographer Diane Arbus's obsession with freaks? In what ways did the early loss of Sylvia Plath's father affect her poetry and presage her suicide? Out of what painful life experience did James Barrie drive himself to invent Peter Pan? Why did Elvis experience such difficulty singing the song "Are You Lonesome Tonight?" What accounts for Bin Laden's radicalism, Kim Jong Il's paranoia, George W. Bush's conflict with identity? Why did Freud go so disastrously astray in his analysis of Leonardo? What made psychologist Gordon Allport's meeting with Freud so pungently significant? How did the loss of his father determine major elements of Nietzsche's philosophy? These

questions and many more get answered, often in surprising and incisive fashion. Additional chapters take up the lives of Harvard operationist S.S. Stevens, Erik Erikson, Edith Wharton, Saddam Hussein, Truman Capote, Kathryn Harrison, Jack Kerouac, and others. Within each case study, tips are proffered along the way as to how psychobiography can be done more cogently, more intelligently, and more valuably.
