In medicine, specifically in end-of-life care, palliative sedation is the palliative practice of relieving distress in a terminally ill person in the last hours or days of a dying person's life, usually by means of a continuous intravenous or subcutaneous infusion of a sedative drug, or by means of a specialized catheter designed to provide comfortable and discreet administration of ongoing medications via the rectal route. As of 2013, approximately tens of millions of people a year were unable

Palliative sedation - Wikipedia

Each stem has hyphens at one or both ends of its text to show that it is found at the beginning, end, or in the middle of a generic name. For example, the stem " -azepam " would be found at the end of a generic name, corresponds to the definition " Antianxiety agents (diazepam type) ", and Lorazepam as an example drug.

Generic Name Stems - U.S. National Library of Medicine

Being Mortal: Medicine and What Matters in the End is a 2014 non-fiction book by American surgeon Atul Gawande. The book addresses end-of-life care, hospice care, and also contains Gawande's reflections and personal stories. He suggests that medical care should focus on well-being rather than survival. Being Mortal has won awards, appeared on lists of best books, and been featured in a documentary.

End-of-life care is the term used to describe the support and medical care given during the time surrounding death. Such care does not happen only in the moments before breathing ceases and the heart stops beating. Older people often live with one or more chronic illnesses and need a lot of care for days, weeks, and even months before death.
